

Day 4 Journal Entry

Senuk Wijesinghe

Prompt option 3: *What are your main takeaways from this first half of your internship and how do you plan to carry those lessons into your second week?*

In the first half of my internship, I learned a lot about collaborating and how different groups of people have different roles within projects. I also learned a lot of communication skills. I plan to carry this out into my second week of the internship, using the skills I learned to work on my final project, speak better amongst my peers, and learn more about the different roles within RedHat. I want to have a good idea of what type of job I could consider having here, and I would really like to experience more of the RedHat culture. Using the knowledge I gained from the different people and roles I was exposed to, I want to network and gain more of a following on GitHub and LinkedIn.
