|---|
| *Prompt option 1: **What is a topic that you found interesting this week? How do you plan to seek additional information and learn more about that topic?*** |
| A topic I found very interesting this week was AI and how it functions, especially with respect to OpenShift. I found it especially interesting that Delta Airlines is a client of OpenShift, and uses it in their software. I think the idea to create an AI built operating system is a fantastic idea and plan, especially to stay competitive in the market. I plan to do a bit more research on OpenShift, as well as speak to more people who work relatively close to the topic, and hopefully get a pretty good understanding of its functionality and how Red Hat created it, and how companies use it. I think it's a great tool and an awesome idea. Another thing I found very interesting this week was the simulation between the UX designer, the Product Manager, and the Engineering Manager. Being given an issue, and seeing how the three sectors operate in order to resolve the conflict was very interesting to me. Thinking of all of the possible issues the consumer is having, thinking of what to ask, and then what to implement to fix that issue, is a lot harder than it might seem. |

*Prompt option 2: **Discuss your interactions with various people during your internship and the value each relationship brings (peer interns, college mentor, session speakers, higher-level leaders).***

*Prompt option 3: **What are your main takeaways from this first half of your internship and how do you plan to carry those lessons into your second week?***

Export + contribute your reflection

1. Once you've filled out the above prompts, export this doc as a PDF. Note: make sure you rename the file to be in the format `[Firstname Lastname] Day 4 Journal Entry`

2. Now that you have a PDF of this week's reflections saved locally to your laptop, you should contribute the PDF to your personal GitHub dropbox area in our shared repo. Use the 'Journal entry contribution' cheat sheet here to assist you and ask a GitHub coach for help if you need it!
